Optimizing Machine Tools

How Innovative Technologies Promote Precision and Productivity

WE LISTEN. WE OBSERVE. WE OPTIMIZE.

DYNABRADE ABRASIVE POWER TOOLS AND PROCESS SOLUTIONS

Since 1969, Dynabrade has been a global leader in the innovative design and manufacture of industrial power tools and related accessories. We have earned an outstanding reputation and position of leadership in the pneumatic tool market and have been supplying high-quality, American Made power tools to customers through a worldwide network of professional distributors. *Discover The Dynabrade Difference...*

SALES SUPPORT

- Factory-trained experts on tools, air systems, accessories and abrasives.
- "Process Solutions" approach: sales personnel outfitted with tools, accessories and abrasives for on-site demonstrations.

COST SAVINGS

- Let us analyze your air system with our Performance Assurance Kit.
- "Same Day/Next Day" shipping on most USA orders.
- USA Flat Rate Repair Program offers quick repairs by factory-trained experts.

TRAINING

- On-site tool training clinics to educate your personnel.
- USA Mobile Training Units bring products directly to the workplace.
- Online demo videos available.

CUSTOMER SERVICE

- Talk with a trained Customer Service Representative.
- Discuss tool specs and applications with an experienced Technical Support Person.
- Utilize our online literature library.

THE DIGITAL MANUFACTURING ECOSYSTEM

ProShop Software Combines ERP, MES and QMS Functions and Earns Top "Frontrunner" Ranking From Software Advice Research Firm

ProShop manufacturing enterprise software has earned the top "Frontrunner" ranking for June 2018 from the consulting, research and software evaluation firm Software Advice*, after being available publicly on the market for just two years. Developed by Adion Systems, ProShop benefits small- and medium-sized manufacturers by providing an integrated, comprehensive set of modules for managing a shop's ERP (enterprise resource planning) operations as well as MES (manufacturing execution system) and QMS (quality management system) functions.

Software Advice, a unit of global research and advisory firm Gartner, Inc., is a leading online software selection consulting service. The company's Frontrunners rankings highlight the best software products for North American small businesses. ProShop's top ranking for June 2018 results from Software Advice' user reviews of more than 70 manufacturing software products, with scores based on published user product reviews on ease of use, and likely recommendation to others.

BACKGROUND

ProShop is a comprehensive web-based shop management system for small to medium manufacturing companies. ProShop was built on the shop floor of a machine shop for nearly 20 years. ProShop is 100% paperless ERP/MES and QMS software for machine shops, fabricators, job shops, contract manufacturers and others in regulated industries that need tight controls on their process and want exacting and timely information to make the best and most profitable decisions.

The story of Adion Systems and ProShop started in 1993 where the founders met at Western Washington University in the Vehicle Research Institute. During college they worked on designing and building racing cars for the Formula SAE competition. This shared sense of purpose to keep building things and working together as a

team led to the creation of a subcontract manufacturing company, Pro CNC, that the founders grew for 17 years. To improve the operations and efficiency of Pro CNC, they developed ProShop – an ERP system to run their machine shop.

ProShop handled their shop scheduling, shop floor control, quality management, CMMS, equipment calibration and much more. During the first 10 years they developed ProShop just for their own company with no plans to ever commercialize it. Customers, vendors and even auditors would tell them that ProShop was the most complete shop management software they'd ever seen. After hearing this many times, along with requests to buy the software, they researched the ERP market and decided to seize an opportunity to help manufacturers just like them to become more globally competitive. In 2014 they sold Pro CNC to an international manufacturing enterprise and established Adion Systems to continually improve, sell and support ProShop.

ERP 4.0

Paul Van Metre, Adion Systems co-founder and vice president of sales, said, "ProShop represents ERP 4.0 or perhaps a Digital Manufacturing Ecosystem. It is a completely paperless, 100 percent electronic method of managing a facility's business including shop floor monitoring of part quality inspection, work instructions and tool management, and doing it with a big data, manufacturing-analytics approach."

According to Van Metre, most conventional ERP systems are accounting-based with minimal functionality for managing and controlling the shop floor environment. On the other hand, systems focused on manufacturing monitoring do not provide the full scope of information needed to guide optimal business strategies.

In addition to typical ERP segments dealing with estimating, quoting and purchasing, ProShop includes MES and QMS control, monitoring and collection capabilities. The MES function tracks machine usage, cutting tool management, work instructions, part inspection data and more, including ProShop-exclusive integration with coordinate measuring machine data. QMS functions include ISO-9000, AS9100, API and ISO 13485 modules, covering all the tasks required to comply with the different quality systems that may be in place at a worksite. Data regarding standards, equipment, users, training, audit reports, non-conformance reports and corrective actions are among the information included. ProShop may be hosted in the cloud or on site, depending on the user's preference.

ADVANTAGES OF THE CLOUD

One advantage to utilizing a cloud-based system is it can lower IT costs for companies. Most companies have limited IT resources who are best spent working on other things. Cloud ERP reduces the IT burden considerably, both on the initial setup, but also with ongoing IT support that would be typically needed for on-premise software installs, updates and maintenance.

Cloud ERP is easier to scale as the company grows. Just add users and go. No software to install on their respective computers. Users can use any device with a web browser to access the system.

Furthermore, updates are much easier. On cloud ERP, updates happen automatically, so customers are always on the latest version of the software with the latest features to help them run their companies. Any customization is done in a way which eliminates the possibility of conflicts with future releases and updates.

You can access your ERP system from anywhere. Even on the road, or on a plane, you can access your system to see status of all jobs, update clients, approve documents, and much more.

Cloud systems can be updated to the latest hardware without the company needing to do anything. No more slow servers that need updating and possibly crashing your system. Your data is always backed up to the cloud and risk of data loss almost nonexistent compared to on-premise servers.

CLEARING THE CONCERNS OF GOING PAPERLESS

Will I lose my data? Not as likely as you are losing the paper copy, that's for certain! With proper IT systems in place, company data is continuously backed up redundantly. The chance of losing data because of a server crash, fire, flood, or other disaster can be mitigated down to nearly zero. That's impossible with paper systems unless a very costly system of duplicating all paper records is put in place.

"ProShop can replace five to six separate software packages that may not communicate well with each other," Van Metre said, adding that use of ProShop can positively impact profitability and throughput. Examples include moving overhead labor to billable functions, opening capabilities for more complicated jobs, improving on-time delivery performance and accurately estimating profit margins on each project. Implementation of ProShop enables more informed and conscious choices surrounding all business decisions. **IMD**
